CUBIN

2024- 2025

CUBin has its inspiration from the structure of a **Cub**e (*CUB in Romanian), inspiration from the field we work in **In**terior architecture and design, from the material we use like IN * Romanian (Linen in English), CANEPA * Romanian (Hemp in English) and US (for all of you, the community who will use year after year these products).

In our mind CUBin feeling resembles with “cubin here with me”.

Our Story

My Story

Our story, my story…

I am just a simple Interior Architect who loves her work, people and the PLANET.

That’s why I wanted to do something for it, for me and for everyone.

The simple though of using

more and more resources has left me with a big question mark?

What was that I could do more?

A design that lasts over time, which is sustainable and keeps the original values and the authenticity that comes from our relationship as humans with wood, wool, linen, cotton and hemp has to be more refined and used with very much care and appreciation.

The green production chain is a subject to subjectivism.

Sustainability has to be now, more than in the future, a daily approach that guides in a conscious way, all our actions. Choosing environmentally-friendly materials, collaborating with local suppliers, giving value to our territory, reducing emissions and protect the safety, health and quality of life of all our family, friends and neighbors stand for the premises : We have to do it now!

My dedication for this story is making you a part of it and create

a bigger story, all together!

We want to become a symbol of our respect for the environment,

for animals, for humans, for design and comfort.

Sustainable

CUBin was born with my desire to use greener, sustainable materials in my interior design projects but I was stuck… Researching, testing, doing for more than two years, gathering a great team around this project had to be done healthy like a village that help grow a child in order to reach the real goal. Everything within the company is produced, perched and designed inside the UE borders. We want to give clients a product that can age with them, with character, charisma and wisdom for future. We selected materials which are at least 70 % natural. We can't afford it to future. Our promise is to have 10% of the total materials used in the production chain to be 100% clean and natural.

Culture

Natural materials like wool is thrown away on our fields because storing it is expensive. We drifted apart from using such an amazing and complex material which has so many applications not only in the design field, but many more. The sheep are happy to grow it for us. The hemp and linen fibers are hard to produce but they are the most reliable and ecological plant culture that can be used to make fabrics. Wood is everywhere and nowhere, in mater of years. This means we have to act responsible if we want to continue breathing. We only use plywood that has the lowest concentration of Formaldehyde, because is the most healthy choice we can do. Natural latex with no additive instead of polyurethane foam is such a better choice, though is so much harder to get and to be produced.

Manufacturing

Same desire for quality and long lasting furniture had to be the reasons behind the team. Architects, designers, craftsmen and upholsters gathered around this initiative and if you ask us, we want to make and manufacture our products suitable for everyone who has the desire to cubin and use the thinking they made the best choice.

Design

CUBin design has to be timeless, like the materials we use. Our very name had to be inspired from the basic shape, like a cube, penciled with curve edges in line with the ergonomic lines of our anatomy. My background in biology helped me to create smooth lines, sofas and armchairs edges that don't bother the arms resting and more that 10% backrest incline for ensuring a great and relaxed position.
We don't want to make a great design in form or aesthetics, but to feel comfortable and ergonomic was the first line of choice.

Name

CUBin has its inspiration from the structure of a Cube (*CUB in Romanian), inspiration from the field I work in Interior architecture and design, form the material we use like IN * Romanian (Linen in English), CANEPA * Romanian (Hemp in English) and US (for all of you, the community who will use year after year this products).

MATERIALS

Sustainability and environmental commitment are now mandatory to propose an idea,
a product, a project or even a life time plan.

Description of inside materials or layers

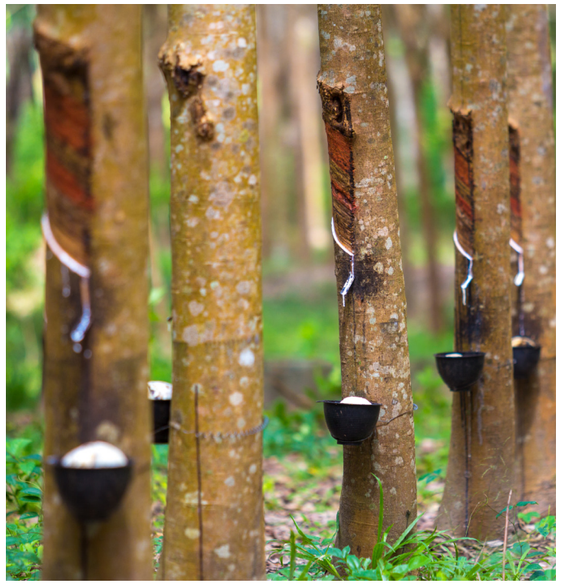

All products have 18, 16, 12, 8 or 3 mm Plywood structure with 0.05 Formaldehyde (the lowest rate manufactured), recycled dens Cardboard, recycled Felt, natural Wool, natural Latex, biodegradable Soya or natural Cotton upholstery Batting.
Bed slats are manufactured by a third party so they are made of metal and plywood (please see technical sheet for that specific item).

Description of outside materials or layers

All our fabrics are no less than 70% clean and natural fibers materials. Legs used are made out of wood, recycled 3d printed powder or natural stone with metal core.

Recycled Foam - recycled material

Latex - natural material

Felt - complex material

Wool - organic material

Plywood - natural material

Wadding - natural and recycled material

MATERIALS

Plywood: natural material
Plywood is a composite material manufactured from thin layers, or "plies", of wood veneer that are glued together with adjacent layers, having their wood grain rotated up to 90° to one another. It is an engineered wood from the family of manufactured boards.
All plywood bind resin and wood fiber sheets (cellulose cells are long, strong and thin) to form a composite material.
We use E0.5 Plywood as base for all our products and furniture because it has the smallest amount of formaldehyde. This technology has been developed to reduce the formaldehyde emissions and to contribute to improve air quality within schools, houses, industrial and recreational vehicles.
The formaldehyde emissions resulting have a limit of 0.05 ppm in accordance with the EN 717-1 standard.

Latex: natural material
Latex is a white milky fluid, a stable dispersion of rubber (organic polymer) particles in water collected from the Rubber tree. Latex foam is a form of latex that is lightweight and expanded. Cellular air bubbles are created inside liquid latex, and they can be shaped into different shapes and sizes.
The extension of the foam is defined by the amount of air inside of these cells. The 100% natural latex core we use it also covers the FSC and organic/GOLS certified natural latex. We use 100% natural latex as base for the comfort areas in our upholstery. It is the layer on top of the felt.

Recycled Foam: recycled material
A new material composed of expanded polyurethane, derived from the agglomeration of the component waste of upholstered products (furniture, shoes, seat parts, etc.) and the processing of the remains of expanded polyurethane.
Eco-friendly, recycled and recyclable multiple times which promotes living comfort and energy saving.
We use it as an alternative of Latex, for customers who want only recycled materials as an option.

Felt: complex material
Felt is a textile material that is produced by beating unspun animal hair, recycled fibers and other materials into a pile, obtaining a flat, compact piece of very resistant material. Natural fibers such as sheep, camel or goat wool or synthetic fibers can be used to obtain different thicknesses.
We use it in upholstery for protecting the layer of metallic springs that make sitting comfort possible and on the sides on to the plywood frame.

Wool: organic material
Wool is the textile fiber obtained from sheep and other mammals, especially goats, rabbits, and camelids. The wool knows how to breathes, that is, it absorbs water vapor from the body and eliminates it in the atmosphere.
It also responds dynamically to the environment and helps the body to regulate the temperature and cleans itself.
Repels water rain (think of sheep and how the drops sit on them) and maintain the body warm in winter and cool in summer.
We use it in upholstery for the products that don't need to look perfect because it has its own personality.

Wadding: natural and recycled material
Soya and Cotton: A lightweight needle punched batting in a blend of Soya and Cotton fibers. It is softer and smoother than traditional battings/waddings with a lovely drape.
Soya fibers are ecofriendly and anti-bacterial. It is made of 50% Soya and 50% Cotton material. Soya fibers are antimicrobial, medium weight and very soft. This wadding is made of 50% soya and 50% cotton fibers.
Recycled Fibers:
A heavy, extremely bulky wadding with a soft handle made from 100 % recycled polyester fibers with a high migration resistance. 100% recycled PES batting.
We use wadding in upholstery for the last layer under the textile you seat on.
